

PRESS RELEASE

Living Modern Work with prisma informatik and Business Central in the cloud

With its cloud-based software offering, prisma informatik GmbH is proving to be the ideal partner in times of modern work.

In the increasingly digitalized world, mobility and flexibility are becoming more and more important. With Dynamics 365 Business Central, business processes from areas such as enterprise resource planning or financial accounting can also be easily handled via the cloud. prisma informatik GmbH supports companies in the introduction and operation of modern business software.

Nuremberg, XX.XX.2021 - The business world made a great leap forward in terms of digitalization last year – driven primarily by the Corona pandemic. Since then, many companies have been practicing modern work regardless of the crisis and want to maintain this in the future. Working in the cloud is almost essential in this context. It is therefore important that the business software used in the company can meet the new requirements regarding cloud readiness.

Business Central is also functionally strong in the cloud version

Dynamics 365 Business Central also provides optimal support in the cloud version. The central, comprehensive ERP solution for business management can be used from anywhere thanks to its modern deployment options via web and app client – on the desktop or laptop as well as on the tablet or smartphone. In this way, numerous, even critical business processes, for example from financial accounting, inventory management or sales, can be carried out securely and smoothly from any location, even when working at home or on the road. At the same time, users in the cloud benefit from regular and automatic updates to keep functions up to date.

Full flexibility and planning in the cloud

Furthermore, companies always remain flexible when using Business Central. The operating model can be individually adapted according to needs and requirements. The respective licensing and operating costs always correspond to the scope of use and thus always remain controllable and plannable. Because pure system operation in the cloud does not require the company's own infrastructure and hardware, this results in a further cost advantage.

Modern work through combination and integration

For even more productivity and flexibility, Dynamics 365 Business Central can also be combined with many other cloud products, such as Microsoft 365. The option of integration with Microsoft Teams offers particular added value. This makes it possible to link Teams directly with Dynamics 365 Business Central and to work together within Teams in Business Central without having to switch to the corresponding application.

The integration offers a simple search function and quick access to Business Central business contacts directly from Microsoft Teams (e.g. to make calls). There is no need to switch applications to do this. Instead, all contact details can be viewed entirely within Microsoft Teams.

Microsoft continues to expand cloud capabilities

In order to provide companies with even better access to the cloud, Microsoft recently announced further innovations at its global partner conference Inspire. Among other things, the new cloud service Windows 365 was presented. It moves the entire operating system (Windows 10 and 11 from the end of 2021) with all applications, tools, data and configurations to the Microsoft Cloud, from where it can be used on any end devices. This creates a new hybrid category for personal computers - the Cloud PC.

The ideal partner on the way to the cloud

As a certified Microsoft partner, prisma informatik GmbH proves to be a competent partner for the implementation and operation of Dynamics 365 Business Central and other software applications (e.g. the BI platform Qlik Sense or the document management system DocuWare) in the cloud. Together with our customers, we successfully master every cloud-based software project in this way - even in times of modern work.
