# NAVdiscovery: Qlik Self-service BI Conveniently Integrated into Dynamics NAV 2015

**prisma informatik exhibits at CeBIT 2015 at BARC booth in Hall 5, Booth A36 (Business Intelligence Sector)**

**Nuremberg, Germany, 3 February 2015.** prisma informatik GmbH from Nuremberg will present NAVdiscovery, the Qlik toolbox that is also compatible with the recently released NAV 2015, at this year's CeBIT. NAVdiscovery allows one of the world's leading business intelligence platforms – the Qlik line of products – to be quickly and conveniently integrated with Microsoft ERP. With NAVdiscovery, both QlikView and Qlik Sense can be connected to Dynamics NAV. In addition, any kind of analysis (or analysis view) can be integrated into the ERP system's interface. In this way, Qlik components can be embedded into any level of Dynamics NAV. Available analysis options are able to be considerably expanded in the simplest of ways.

According to Claudius Malue, Managing Director of prisma informatik, there are many advantages of the self-service BI solution in combination with Microsoft Dynamics NAV. "By integrating Qlik solutions, Dynamics NAV can offer practically unlimited analysis options. Users can request a specific analysis without turning to the IT department for support. Data can be evaluated in any number of ways and analyzed independently, such that the user is no longer limited to ready-made analysis frameworks. Qlik Sense also offers options for creating different views, reports, and dashboards simply by dragging and dropping."

As a Qlik partner, prisma informatik already offers powerful options for simplifying work when integrating systems, particularly for Dynamics NAV. In stark contrast to other connector solutions, NAVdiscovery does not rely on ready-made scripts, but rather creates them directly from the

corresponding NAV environment. This process automatically accounts for customizations in ERP data, as well as customer-specific extensions and modifications of Qlik data models.

One of the other special features is NAVdiscovery's grouping function, which makes it possible to completely restructure ERP data for analysis purposes, without needing to add extensions within Dynamics NAV. The desired dimensions can be reconfigured at any time, depending on individual requirements.

The toolbox also includes various application layouts with which the user in a particular department can immediately work or that can also be modified or expanded as needed. Basic templates are designed based on previously generated scripts and can also be flexibly configured.

**About prisma informatik GmbH**
prisma informatik GmbH was founded in October 2006. The company's range of products includes services and solutions based on the Microsoft technologies Dynamic NAV, SharePoint, and Microsoft SQL Server for SMEs with especially high demands for quality, primarily from the areas of retail, automotive, and manufacturing. In the area of Business Intelligence, prisma informatik implements the innovative self-service BI solutions QlikView and Qlik Sense in order to specifically address customer requirements. prisma informatik provides services for project implementation as well as the design and implementation of complex systems. Project work, ongoing development over the long term, and support are all provided from a single source. The users of solutions from prisma informatik are companies that are doing business both nationally and internationally.

The product portfolio includes a comprehensive selection of training options at the prisma academy.
